

IT Managers Meeting – June 7, 2006
Room 205, C. Roland Christensen Center

Pre-meeting vendor presentation: AppSense

12:15 - 12:45 pm

Know what Hackers Know and New Security Threats for Universities

In September 2005, University of Utah Health Sciences Center (UUHSC) was attacked by a worm that brought its infrastructure to a halt. Even with two Anti-Virus solutions fully updated they were unable to stop the threat. This is why UUHSC is now using AppSense Day Zero Security Solutions to stop viruses and other malware from infecting its IT infrastructure.

AppSense is the leading provider of Endpoint Security Solutions for organizations around the World, with Day Zero protection for desktops, laptops, servers, virtual systems and embedded devices against all forms of malicious threats and preserving end point environments in their optimal state to ensure system integrity.

Go to www.appsense.com to learn more.

Appsense will be providing sandwiches and drinks.
